

Requirements for conference participants to submit manuscripts to the CEAS Aeronautical Journal or the CEAS Space Journal (following publication in the conference proceedings)

- Publishing research papers after results have been presented during the *Aerospace Europe Conference 2021* provides an opportunity to extend the analysis and furnish more background for the reader of an appropriate archival journal. In addition, the quality of the publication benefits from the comments of two or more peer reviewers as well as the Associate Editor, and the work becomes more attractive to interested readers.
- Springer's CEAS Journals, the CEAS Aeronautical Journal and the CEAS Space Journal, routinely employ special programs ("iThenticate" and "Turnitin") to determine the degree of similarity with other publications available online, in particular with regard to plagiarism. Therefore, the manuscript **must substantially differ** from the one published in the *Aerospace Europe Conference 2021* proceedings. Only less than 50% overlap with any previous publication is acceptable, otherwise the publisher would consider the submitted manuscript as already published and the manuscript would be rejected. However, the submitted manuscript must cite the conference publication to ensure some continuity of the work.
- The title and the abstract have to be original. Parts like introduction or descriptions can be amended, but need not be changed excessively. The sections dedicated to results and discussion have to provide significant novelty with respect to the *Aerospace Europe Conference 2021* proceedings.
- There is no page/figure/table limit on submissions to the CEAS Journals as long as the reviewers find the content of interest to the community. An average article length of 10-12 pages is desired, as are 20 references or more. This is not a hard requirement, but sets the manuscript apart from a conference proceedings paper.
- For general information, please refer to the Submission Guidelines on the following websites:
 - CEAS Aeronautical Journal <https://www.springer.com/journal/13272>
 - CEAS Space Journal <https://www.springer.com/journal/12567>
